Sharing Chinese Wisdom with the World

First and foremost, let me extend my heartfelt congratulations to the English Edition of Science and Technology Daily (also known as *S&T Daily*) on reaching its two-year milestone and publishing its 100th issue! The creation of this English edition serves as a catalyst for fostering academic and educational exchanges between China and foreign countries.

I firmly believe that through such academic interactions, we can delve into our respective ideas, philosophies, and forge the relationships that will shape our future. It is indeed a highly rewarding endeavor. As someone devoted to the preservation of cultural heritage, my aspiration is not only to facilitate greater communication within this domain but also to drive the advancement of Sino-Japanese relations.

--Professor Nobuo Aoki (Japan), Director of the International Research Center for the Chinese Cultural Heritage Conservation of Tianjin University.

What I would expect from a journal such as *S&T Daily* is a powerful effort towards honest and reliable information to the general public. This is the line already taken, but it is important to pursue with all available tools the correct information in all fields of knowledge. My particular focus is on scientific information concerning human health, and I know how important is the public perception and understanding in the success of our health-preserving strategies, for instance vaccination. *S&T Daily* can play a great role in this sense by disseminating information and making the public willing to know more. Information

and technologic innovations and achievements in China etc. Happy 100th edition!

and communication can also help a lot, and this is my wish, in strengthening international collaboration in science and health protection.

-- Professor Diana Boraschi (Italy), the chief scientist of the Laboratory of Inflammation and Vaccines at SIAT-CAS.

I wish *S&T Daily* another prosperous 100 issues and more! Always interesting to read about fellow foreign experts, what are the newest scientific

-- Dr. Marie-Luce Chevalier (Belgian/France), a research professor at the Chinese Academy of Geological Sciences.

Science and technology have a vital role to play in telling China's stories to the world. Science and technology depend on reason, so they are a good channel for a rational exchange of views with international partners. But Science and

technology also have fascinating stories to tell about exciting new developments, so they are a good way to engage with a wider audience on a human and emotional level as well. This is why the English Edition of *S&T Daily* is such a key element of China's storytelling to the people of the world.

ement of China's storytelling to the people of the world.

--Mr. David Ferguson (the UK), honorary chief English editor of Foreign Languages Press, CICC.

S&T Daily serves as a vibrant window through which China's scientific and technological community shares its achievements with the world. From its inaugural edition to its 100th milestone, these numbers represent the historical journey of China's relentless innovation

and development in the field of science and technology. The 100th issue not only symbolizes past accomplishments but also signifies an exciting new beginning – a beacon guiding us towards even greater horizons. Let us join hands, authors and readers alike, with

"*S&T Daily*", and embrace the forthcoming journey of the next hundred issues!

-- Professor Francesco Faiola (Italy), a foreign researcher at the Research Center for Eco-Environmental Sciences of the Chinese Academy of Sciences (CAS).

Warm congratulation to 100th edition, *S&T Daily*. Usually in life, the number 100 is a milestone. Achieving 100 is evidence for continuity, devotion, quality and hard work.

S&T Daily meets all of these attributes. Reading *S&T Daily* is a part of my daily life, it is a valuable platform for learning state of the art and it is a welcome media to address my thoughts about S&T.

-- Dr. Ömer Sahin Ganiyusufoglu (Germany), the industrial development consultant with Qingdao International Academician Park.

S&T has always played a vital role in developing a country, particularly so in the Digital Era of today. Many new scientific discoveries and disruptive technologies have emerged so quickly in the last two decades. Thus, newspapers play a significant role in reporting

and publicising the truth of S&T issues and in educating the general public on the social, environmental and economic impact of S&T. This has to be done based on evidence and without fear or favour. Thus, I applaud the *S&T Daily* in fulfilling this role well since its establishment. I congratulate *S&T Daily* on your 100th Edition. I hope *S&T Daily* will continue to serve the community for many years to come.

establishment. I congratulate *S&T Daily* on your 100th Edition. I hope *S&T Daily* will continue to serve the community for many years to come.

--Professor Chuah Hean Teik (Malaysia), a consultant professor at NPU.

oment, have a deep understanding of the challenges behind its progress and appreciate its significance for global prosperity. On the platform of *S&T Daily*, they sincerely present their stories of engaging in international scientific and technological cooperation. Additionally, they provide factual information to confront misunderstandings about China.

On this auspicious occasion of the 100th issue, we're honored to receive a series of readers' wishes and advice. We sincerely express our gratitude for your continued engagement and invaluable feedback, which has been instrumental in shaping our publication.

The Editorial Office of English Edition
Science and Technology Daily
July 6, 2023

Congratulations to *S&T Daily* on the publication of its 100th edition. I am honored to have been associated with it since its inception. Best wishes to the paper and its staff for continued success.

--Dr. Mark Levine (U.S.), professor at Minzu University of China.

S&T Daily has a long-standing reputation as one of China's leading news publications whose editorial scope extends far beyond what would normally be considered science and technology per se. As it publishes its 100th issue, it is time not only to celebrate this outstanding accomplishment, but also to look forward. It is clear that developments in science and technology will play an ever greater role in shaping the future of our societies, our nations, and our planet than they have in the past. Accordingly, I look forward to S&T playing an ever more important role serving as a primary conduit of information flow between the scientific/technology community and the wider public, not just in China, but worldwide.

--Dr. Norman Macleod (the UK), the honorary professor at Nanjing University and a paleontologist.

For 100 editions, *S&T Daily* has always provided a thorough and timely overview over the scientific and technological achievements in China, the impact of these developments on economy and the society at large, as well

as the challenges S&T research and development face. *S&T Daily* thus plays an important role in educating the public and informing political stakeholders.

I wish the management all the

best for the future.

--Professor Klaus Obermayer (Germany), a consultant professor at Northwestern Polytechnical University (NPU).

I congratulate *S&T Daily* on the occasion of the publication of its 100th English edition. The Daily has become an important platform for informing the world, especially the foreign scientific and technological community in China, about China's scientific and technological accomplishments. It has

also become a major source of information about China's policies regarding the recruitment of foreign talent (talent exchange) by China. It provides the opportunity to foreign experts to share their knowledge and experience for the advancement of humanity and the building of a better community with

shared future for mankind. I wish it many more successes in the years to come.

--Dr. Abdul Ghani Razaqpur (Canada), a chair professor in the College of Environmental Science and Engineering at Nankai University.

As a reliable and credible media outlet, *S&T Daily* has undoubtedly built a legacy of providing objective, accurate, and timely news on scientific advancement, technological innovation, and their impacts on society for the past decades. This milestone wouldn't have been possible without

S&T Daily's strong commitment to excellence and strategic efforts to ensure they remain at the forefront of the media industry. Therefore, I join all other well-wishers in congratulating *S&T Daily* and its entire staff member for its impactful accomplishments. Furthermore, I hope *S&T Daily* will con-

tinue to strive toward excellence regardless of any challenges.

--Dr. Oluwarotimi Williams Samuel (Nigeria), senior lecturer & lead investigator, School of Computing and Engineering, University of Derby, United Kingdom.

In the modern world, only knowledge-driven nations can afford the big challenges posed by changing environment and eternal fight with infections. Acceptance of the concept that science

has no borders remains the first requirement and the basis of good public health practice. China is the door of the future advanced world, but the key to open it remains good communication

and a common language.

-- Professor Aldo Tagliabue (Italy), the chief scientist of the Laboratory of Inflammation and Vaccines at SIAT-CAS.

Today, *S&T Daily* publishes their one hundredth edition. Now, 100 is just a number. Any newspaper can publish 100 issues. So I will not congratulate *S&T Daily* for achieving this milestone. I will congratulate them to something different: After only two years, the young newspaper has become a stable and very much appreciated information source on cutting-edge research and technological advances. The journal-

ists, editors, web designers – all the professional staff of *S&T Daily* together – produce a newspaper which always is interesting, informative, clearly structured, thought-provoking, well-rounded, and, as a result, quickly growing in readership. They did this within "only" 100 issues. To that I sincerely and wholeheartedly want to congratulate the whole team. Congratulations. All the best! And keep up the great work!

--Professor Thomas Weise (Germany), a computer scientist from Hefei University.
